ABSTRACT

Since 1989, the Texas Education Agency has reported selected results from the Scholastic Aptitude Test (SAT) and the American College Testing (ACT) Program's original and Enhanced ACT Assessment for prior year graduating seniors. This fourth annual report presents data for the 1990-91 graduating class. Score data from these examinations are included in the Texas Academic Indicator System. Texas statewide and district results are presented, along with aggregate results of the nation and other states. The Texas mean SAT total remained below the national mean, with a Texas mean of 874 in 1991, compared with the national 896, and a 1992 Texas mean of 876, compared with the national 899. The mean ACT composite score gap between Texas and the nation has lessened over the past 21 years. In general, Texas SAT-tested students have completed fewer academic courses than students nationally, supporting the notion of different academic preparedness, but better prepared Texas students score as well or higher than do students nationwide. Four tables present test results. An appendix provides five more detailed tables of regional results. (Contains 15 references.) (SLD)

PREFACE

Since 1989 the Texas Education Agency has reported selected results from the Scholastic Aptitude Test (SAT) of the College Board's Admissions Testing Program and the American College Testing Program's original and Enhanced ACT Assessment for prior year graduating seniors. This fourth annual report presents these data for the 1990/91 graduating class.

Since the fall of 1990, SAT and ACT score data have been included in Texas' Academic Excellence Indicator System (AEIS). The AEIS was mandated in summer 1990 Texas legislation (Senate Bill 1) to establish a system of school academic performance accountability to local communities and school boards and to state education and legislative officials. Additional legislation passed in the summer of 1991 (House Bill 2885) also mandated the use of SAT and ACT data along with other criteria in the determination of Texas Successful Schools Award System (TSSAS) awards and recognition in the current biennium. So far, individual campuses have been honored through TSSAS for school year 1991/92, with another cycle of recognition scheduled for 1992/93. Note that neither TSSAS nor AEIS employs the rank ordering of campuses or districts based on SAT or ACT scores alone.

Some of the 1990/91 graduating seniors SAT data contained in this report were presented to the State Board of Education at its September 1991 meeting; corresponding ACT data were presented at its October 1991 meeting.

If additional information about this report is needed, please contact Dr. Linda Hargrove in the Division of Policy Planning and Evaluation at (512) 463-9701.

OVERVIEW AND INTERPRETATIVE ISSUES

Results from the Scholastic Aptitude Test (SAT) of the College Board's Admissions Testing Program and the American College Testing Program's Enhanced ACT Assessment, a revised ACT that replaced the original ACT effective October 1989, are reported for 1990/91 graduating seniors. Texas statewide and district results are displayed along with aggregate results of the nation and other states. Included also are selected test score trends and scores among student subgroups and among selected groupings of Texas regular and special public school districts as defined by the Texas Education Agency (TEA). Plus, this year's report contains state, district, and various district grouping summaries of the combined SAT and ACT results, as defined within Texas' Academic Excellence Indicators System (AEIS) (TEA, 1992b). Report purposes are to promote understanding of the diversity existing among graduates tested and to suggest areas for educational action in the schools.

For individual students, college admissions tests are measures of developed academic abilities that are best used in conjunction with other measures such as high school grade point average and courses taken to predict academic performance in college. When examined over time, aggregate changes in these test scores may indicate how well educational institutions are preparing students for college. However, it is always inappropriate to make decisions about individuals, groups of individuals, or educational institutions based on SAT or ACT test scores alone. Because not all graduating seniors take the SAT or ACT, comparisons among educational entities are best made when the percentage of students tested, student characteristics, and education and policy context are similar (also see College Entrance Examination Board, 1988, and the ACT Program, 1991c). Ultimately, the critical outcome is increased student academic preparedness as reflected by increased scores without reducing students' participation in (percentages tested) or access to the testing.

Some data in this report originate from summary reports of state and national test score profiles of public and non-public high school graduates released annually by The College Board (The College Entrance Examination Board, 1992a, 1992b, 1991a, 1991b) in August and by ACT (The American College Testing Program, 1992a, 1992b, 1991a, 1991b) in September. Texas' public school student test score data were provided directly to TEA by the two testing programs. Additional TEA district characteristics data were examined in conjunction with the most recent scores from 1990/91 seniors (through March 1991 for the SAT).

Verbal and Math scores from the SAT range from 200 to 800 and sum to the SAT Total score ranging from 400 to 1600. Since October 1989, the (Enhanced) ACT Assessment consists of English, Math, Reading, and Science Reasoning test scores with a standard score range of 1 to 36; the Composite is the average of these four scores. **Note that Enhanced ACT scores beginning in 1989/1990 and original ACT scores reported on a different scale beforehand are noncomparable.**

TEXAS VERSUS NATIONAL TRENDS

The Texas mean SAT Total (sum of Math and Verbal scores) fell to a maximum of 31 points below the national mean during the past 21 years, although the Texas mean of 874 in 1991 and 876 in 1992 was slightly higher at 22 points below the 1991 national mean of 896 and 23 points below the 1992 national mean of 899. The mean ACT Composite score gap between Texas (19.9 in 1991 and 1992) and the nation (20.6 in 1991 and 1992) has lessened over the past 21 years. Reasons often given for score gaps include the overall academic preparedness among groups, which sometimes relates to differences in the proportions of traditionally low-scoring, underprepared examinees. Repeatedly, findings reported by the two testing programs and researchers have shown the tendency for test scores to increase as the amount of academic coursework goes up.

In general, Texas SAT-tested students have completed fewer academic courses than students nationally (23 versus 40 percent, respectively, at the 20+ courses level in 1991), supporting the notion of differential academic preparedness, but the better prepared Texas students have tended to score just as well or higher than students nationally.

Source of data in table: ACT Program; TEA, PEIMS, actual public school graduate numbers; CEEB (1991c) report of Western Interstate Commission for Higher Ed. projections, total graduate numbers; TEA, Div. of Prog. Eval., analysis of ACT data of Texas public high school graduates.

Despite the fact that the number of ethnic minority students tested has grown, Texas minority student mean scores have improved somewhat compared to majority student scores over the past few years. Typically, Texas SAT and ACT score results have shown minority students completing relatively fewer academic courses when compared to majority students—one possible reason for mean score discrepancies among ethnic groups.

College Board reports also indicate that the generally higher scores achieved by men relative to women on the SAT may relate to the rigor of academic courses they take. For instance, disproportionately fewer women have tended to enroll in mathematics courses such as geometry, trigonometry, and calculus and in natural sciences courses such as chemistry and physics. In terms of ACT Composite scores, the higher scores achieved by women on the ACT English test largely offset the higher scores obtained by men on the ACT Math test. Although 1991 and 1992 Texas ACT Composite scores were virtually the same for males and females, the Math, English, and Science Reasoning score differences deserve continued scrutiny.

For further detail regarding some of the 1990/91 Texas versus national SAT results discussed above, see Table 1; for similar 1990/91 ACT results, see Table 2.

White	56,209	83,231	67.5	17,100	20.5

Source of data in table: TEA, PEIMS, actual public school graduate numbers; TEA, Div. of Policy Planning and Evaluation, analysis of CEEB and ACT Program data of Texas public high school graduates with percentages from analyses also reported in AEIS (TEA, 1992a).

*Group numbers may not add to total for all groups because gender and ethnic group for some students was not included or was not known.

**The 1992 Academic Excellence Indicator System college admissions test criterion scores are an SAT Total = 1000 and or an ACT Composite = 25.

AEIS Indicators of Texas College Admissions Test Results

As mentioned previously, Texas' Academic Excellence Indicators System (AEIS) includes measures of combined but unduplicated percentages of graduating seniors tested and percentages meeting a specific score criterion on either the SAT (SAT Total: at or above 1000) or the ACT (ACT Composite: at or above 25). In other words, even if a student took both tests, each individual's participation or criterion score achievement is counted only once in calculating these percentages. In prior years, TEA did not receive the type of data from the two testing programs that allowed calculation of these values.

Table 3 displays the statewide averages for percentages of SAT- and/or ACT-tested 1990/91 public school seniors and the percentages meeting the criterion score on either test. (Note that Table 1 contained these percentages for the SAT; Table 2, for the ACT.) Although females participated more often in SAT and/or ACT testing than males, males met the criterion for either test more often than females. This was consistent with state and national results for both the SAT and ACT separately. Score gaps among ethnic groups were apparent from inspection of the differences in percentages meeting or exceeding criterion scores and also were consistent with separate SAT and ACT results.

Texas and the Other States

Table 4 presents results of the SAT testing program for the 50 states for 1990/91 (College Entrance Examination Board, 1991c). Average scores on the verbal portion of the test ranged from 395 to 515, and on the mathematics portion from 437 to 578. The percentages of students taking the test ranged from 4 percent in Mississippi to 81 percent in Connecticut. These figures were calculated by the College Board based on estimates of the total number of public and nonpublic school graduates in each state and in the nation. The Texas graduates tested total was 79,946; Texas public school graduates, 72,228 (see Table 1).

Source of data in table: College Entrance Examination Board (1991c).

State and District Percentages of SAT-tested Students

As presented in previous years of this report, results indicated that higher 1991 mean SAT scores by state were associated with lower percentages of seniors taking the test. Reasons often given for this relationship are that primarily only the most academically able in the state take the test and/or that the majority of the state's colleges and universities historically prefer or require another admissions exam such as the ACT. In contrast, relatively low mean SAT scores and high percentages tested in states such as Texas appear to occur because more students of varying academic backgrounds are tested, which lowers averages overall.

However, this relationship did not persist for school districts in Texas and for states when other factors were considered. For instance, when Texas was grouped with 22 other states with over 35 percent of seniors tested, the relationship was nonexistant or barely in evidence. These correlational fluctuations underscore the inaccuracies inherent in making state or other types of simple group comparisons based on test scores alone, especially when the percentages tested, along with other educational and demographic factors of the state or group, are markedly dissimilar. For district mean data within Texas, negligible correlation existed between test scores and percentages tested. Statewide, districts also varied greatly in patterns of SAT versus ACT testing participation, as well as in percentages tested.

Districts Within Texas

The SAT results listed for each district in Table 1-A in the Appendix include average SAT Math, Verbal and Total scores of 1991 graduating seniors, number of graduating seniors with SAT scores, total number of graduates, percent of graduates with scores, number and percent of SAT-tested graduates with SAT Total scores of 1000 or higher, and a "note" column for district-specific comments. Similarly, ACT results are listed by district in Table 2-A of the Appendix, except that average ACT English, Math, Reading, Science Reasoning, and Composite scores are reported rather than SAT scores. Finally, Table 3-A in the Appendix shows by district the number and percentage of SAT- and/or ACT-tested graduates and of graduates scoring at or above the criterion on either test, a "test note" column about limitations to a specific test or lack thereof, and "note" column in correspondence with Tables 1-A and 2-A.

More specifically, average SAT and ACT scores for districts are not listed when the number of graduates with scores is less than five because of the instability of statistics based on such low numbers of scores. A "< 5 tested" note is printed for these districts. This precaution also helps to ensure that single sets of scores cannot be identified or linked with any individual. In addition, districts with fewer than five students scoring at least 1000 or above for the SAT

Total or having an ACT Composite score at 25 or higher are given a "< 5 high" comment. Districts with no graduates tested received a "none tested" note, and districts with no TEA-recorded graduates reflect "no grads TEA." The test note column in Table 3-A displays "SAT only" or "ACT only" when statistics are based on just one of the two tests and lists "neither" when neither test was given to students in a district.

Overall, data on 77,239 public school graduates in 1991 who participated in the Admission Testing Program's SAT and/or Achievement Tests and data on 47,839 students taking the ACT were obtained directly from the testing sponsors for this report. District results showed a complete set of SAT scores for 72,228 graduates and ACT scores for 47,818 graduates. Although the believed effect is small, some amount of inaccuracy may have resulted in using high school codes supplied by the testing programs to link students' scores to schools and districts (personal communication, 1989). In another small set of cases, student miscodings of one of the fields used for student matching may have resulted in more than one set of scores per student (personal communication, 1990). Such discrepancies may have caused some imprecision in estimating percentages of graduates tested. When graduate tested percentages above 100 resulted in Tables 2-A and 3-A, they were reset to 100.

Combined results for the 972 public school districts with graduating seniors or test score data indicated: both SAT- and ACT-tested graduates for 856 districts, an additional 92 districts with ACT-tested students only and 16 with SAT-tested students only, and 8 districts showing neither SAT nor ACT participation. Of the 964 districts with SAT and or ACT participation, 458 showed fewer than five graduates meeting the SAT and or ACT criterion score, 61 had fewer than five graduates taking either test, and 13 districts had no graduates according to TEA records (1 of the 13 also showed no testing).

District and Student Characteristics Data

Tables 4-A and 5-A in the Appendix present results of the two testing programs when the district data are aggregated into 26 types of groupings of districts with similar characteristics as defined by TEA's ANALYZE program. From these, the results in both tables start with district average daily attendance (ADA) and end with the district percentage of teachers with an advanced degree. These groupings allow examination, by the various types of district characteristics, of the pattern of: district average scores and percentages of students tested for each test separately in Table 4-A; in Table 5-A, percentages of SAT- and or ACT-tested graduates and percentages meeting the score criterion on either test, as defined within AEIS (TEA, 1992b). Other results described below but not shown in these tables concern summaries of scores grouped by student-level characteristics, which were obtained for the SAT from the Student Descriptive Questionnaire and for the ACT from the Student Profile Section and High School Course Grade Information portions of the Student Information booklet.

Many of the separate mean SAT Total and ACT Composite score results and the 1991 combined SAT and/or ACT graduate percentages meeting the score criterion (per AEIS) were consistent with most published findings. For instance, increasing district wealth, increasing student family income, or decreasing percentages of low-income students within districts, corresponded with rising mean scores for data from the 1988 through 1991 school years. Other relationships and similarities existed between the college admissions testing data and the: (a) district average percentage of students passing all sections of the 1990/91 Texas Assessment of Academic Skills (TAAS) test, (b) district average on prior years of the SAT and ACT, (c) district average teacher salaries, (d) district average percentage of teachers with advanced degrees, (e) student letter grade average, and (f) student number of academic courses completed. That is, mean scores went up as the values of each of these variables rose.

CONSIDERATIONS FOR EDUCATIONAL ACTION IN THE SCHOOLS

A distinction should be made between demographic and educational variables related to test scores. This distinction is important because the education community should focus on the attributes that it can most directly influence. In other words, variables such as family income or parent level of education are not under the school's practical domain of control.

In adhering to the distinction above, a number of approaches are suggested for educational action in the schools to improve students' academic preparation for college. These center on encouraging students to take a greater number of academically challenging courses, increasing the array of rigorous, challenging courses offered, and encouraging more participation in college admissions testing programs. Schools must ensure that the courses offered cover genuinely advanced material and are not simply labeled as advanced courses. For some districts, the most practical option for expanding the array of rigorous course offerings may depend on technology such as distance learning.

In addition, schools are advised to: (a) guard against low expectations for female, minority, and other student groups; (b) avoid "steering" these student groups into types of courses that are less rigorous academically; and (c) monitor tendencies for students to take easier courses to maintain high or acceptable grade point averages. Encouraging students to take courses that focus primarily on preparation for taking college admissions tests should be carefully considered. Only well-designed and well-executed supplemental courses focused on improving test-taking strategies, coupled with instruction that broadly addresses verbal or quantitative skills, are recommended for consideration, especially for students from traditionally low-scoring groups. In summary, the educational goal in this context is to better prepare students for college, not simply to raise college admission test scores.

1991 SAT and ACT Results in Review

A brief review of the 1991 SAT and ACT results is provided to help reinforce the targeting of improvement efforts in areas under the most direct control of the schools—that is, student access to educational opportunities and testing participation. For interpretation purposes, note that comparisons among aggregate scores from any educational entity, state, or group are best made when testing participation rates, student characteristics, and education and policy contexts are similar. Highlights of results below focus on differences between among Texas and the nation, Texas and other states, various types of students, and Texas school districts.

- The last decade showed some recovery over the previous decade's decline in both Texas and national SAT averages, with relatively more improvement in Texas within the last five years. The average 1991 Texas SAT Total of **874** was 22 points below the national average of **896**; in 1992, Texas at **876** was 23 points below the nation at **899**.

- ACT Texas versus national score trends mirrored SAT score trends over the same period. The 1991 and 1992 Texas average ACT Composite score of **19.9** compared to a 1991 and 1992 national average of **20.6**.

- Texas SAT-tested students had less academic preparation than students nationally; SAT- and ACT-tested ethnic minority students had fewer academic credits than majority students, and females completed fewer of the more rigorous math and natural sciences courses than males.

- Despite the growth in numbers of ethnic minority students tested in recent years, Texas minority ACT and SAT scores have shown some improvement relative to the majority, although scores of the majority still tend to be higher.

- A relatively higher percentage of 1991 Texas public school graduates took the SAT (48%) compared to the ACT (32%); altogether, slightly over 62 percent took the SAT and/or the ACT, based on unduplicated student counts. These percentages were still below the highest 1991 state percentage (81%) reported for just SAT-tested graduates in Connecticut.

- Differences between males and females and among ethnic groups in the percentages of public school graduates scoring at or above the SAT and/or ACT criterion scores were consistent with separate SAT and ACT mean score results covered in this and other published reports.

- In general, states with the lower percentages of SAT-tested seniors tended to show higher state mean SAT scores, and vice versa. In Texas, the simple relationship between district average SAT or ACT scores and district percentage of seniors tested was negligible.

- Considering both 1991 SAT and ACT results together for 972 public school districts indicated that the vast majority (856) of districts participated in both SAT and ACT testing; only 8 districts showed no testing participation. A total of 891 districts reflected five or more graduates taking the SAT and or ACT.

BEST COPY AVAILABLE

- Consistent with previous findings, SAT Total and ACT Composite scores tended to go up as the values of certain demographic variables rose including: district wealth, student family income, district percentage of non-low-income students, district average teacher salary, and district percentage of teachers with advanced degrees.

- In general, SAT and ACT average scores also increased as the values of selected educational variables went up including: district average percentage of students passing all sections of the 1990/91 TAAS test, prior year district average SAT and ACT, student letter grade average, and student number of academic courses completed.

In conclusion, the most general suggestion to the educational community for improving students' SAT and ACT scores, or academic preparation for college, is to focus on improving the academic preparation of all students, while also encouraging testing participation. That is, schools and communities should work on increasing educational inputs rather than faulting school or student demographics, which are less subject to the direct influence of schools.

COMPLIANCE STATEMENT

TITLE VI, CIVIL RIGHTS ACT OF 1964; THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

(1) acceptance policies on student transfers from other school districts;

(2) operation of school bus routes or runs on a non-segregated basis;

(3) nondiscrimination in extracurricular activities and the use of school facilities;

(4) nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;

(5) enrollment and assignment of students without discrimination on the basis of race, color, or national origin;

(6) nondiscriminatory practices relating to the use of a student's first language; and

(7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

TITLE VII, CIVIL RIGHTS ACT OF 1964 AS AMENDED; EXECUTIVE ORDERS 11246 AND 11375; TITLE IX, EDUCATION AMENDMENTS; REHABILITATION ACT OF 1973 AS AMENDED; 1974 AMENDMENTS TO THE WAGE-HOUR LAW EXPANDING THE AGE DISCRIMINATION IN EMPLOYMENT ACT OF 1967; VIETNAM ERA VETERANS READJUSTMENT ASSISTANCE ACT OF 1972 AS AMENDED; AMERICAN DISABILITIES ACT OF 1990; AND THE CIVIL RIGHTS ACT OF 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all Federal and State laws and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, handicap, age, or veteran status or a disability requiring accommodation (except where age, sex, or handicap constitute a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Employment Opportunity Affirmative Action employer.
